Subject: [BoatAnchors] Gonset Mic Plug  
Message-ID: <6f573f30-1163-9100-6e9e-be89b0c9db3e@frontier.com>

I have tried several times to find the right Switchcraft plug that will plug into the mic socket on my Gonset G-76.? I believe the military nomenclature was PJ-068.? I believe that the same mic plug was used in the Collins S-Line radios.

Does anyone here have the right Switchcraft part number for this item?

73, Steve WA9JML

Steve -  
PJ-068 was Switchcraft type 480. This also is the same as the standard switchboard plugs used by Western Electric for about a half century.

?? There are three types of ring-tip-sleeve plugs: 1/4 inch diameter with large tip, commonly used for headphones. A 1/4 inch RTS with small tip, commonly used on switchboards and broadcast type jack panels. A smaller diameter RTS used for military microphones. This is the plug used by Collins, Drake, etc and on a great many aircraft radios. Switchcraft makes all of them. I am not sure which ones Gonset used.

Thanks, Chuck!? I just ordered one from Digi-Key.

Now, I can proceed with the restoration of a rig I bought back in 1965!

Subject: [BoatAnchors] Wavemeter with Buzzer  
Message-ID: <00cd01d5f0ce\$a9d42700\$fd7c7500\$@proc@sympatico.ca>

Hello Everyone ,

I am trying to catalogue a Marconi (UK) model MP-4 wavemeter in conjunction with a collector in the UK.

This wavemeter contains a buzzer whose function I am not clear on.

The known clues are presented in Larry Dighera's web page:  
[http://dighera.com/marconi\\_mp4\\_wavemeter/](http://dighera.com/marconi_mp4_wavemeter/)

As for the frequency range, it's a guessing game since all the dial shows is digits 7 to 8

If the dial is read as 7 to 8 MHz, then that frequency is too high for the period of the instrument.

If it means 70 to 80 meters (4585 to 3750 KHz respectively) , that too seems a bit high.

However, if the dial means 700 to 800 meters (428 to 375 KHz respectively) that places it in the MF frequency range which is a closer match to the instrument's period.

So the question to focus on is: What is the purpose of the buzzer?

Regards,

Jerry Proc

Jerry,

The buzzer is used as an RF source, to essentially make the wave meter a variable signal source.

See page 167 from Bucher's Practical Wireless Telegraphy.

Regards,  
Al

1900? Probably much longer wavelength than 80 meters, 800 meters?  
Even that was a short wavelength then.

That very long URL seems to have the actual target buried behind some protection website link.

It might work for Richard after some judicious editing.

Jerry-  
It appears that Gmail (google) is blocking the dighera.com website, for unknown reasons. Following links from Google search to digherra.com produces the same result.

?? Well, I don't understand how Google can be blocking the site.  
I do not use Gmail and access the URL directly from a browser  
using the address from the list message. I tried both Firefox and  
Edge, same results. I get the same thing from the parent site.  
Now, some are able to access this so what is different?  
Evidently, the block has to do with permissions set up on the  
site server but that would apply at all times and evidently some  
are able to access it. Beyond my understanding. I still want to  
see what this thing looks like.

Hi Chuck,

This is reminiscent of "blackballing", the days when some ISPs blocked certain domains because those domains could not control the amount of SPAM mail or malware being sent. At one time I could not reach certain domains because my ISP, Sympatico.ca was blackballed. This is the first instance of blackballing that I have seen in years.

Jerry-

It appears that Gmail (google) is blocking the dighera.com website, for unknown reasons. Following links from Google search to digherra.com produces the same result.

?? FWIW, Netcom is really Earthlink. My address is a very old one, Netcom was trying to compete with AOL and set up something it called Internet Exchange. I got my first e-mail, which I still have, as ix.netcom.com over the years netcom was sold several times and the old addresses are now part of Earthlink as legacy accounts. So, perhaps the site with the wavemeter is blocking Earthlink accounts. The only way I can check this is through another ISP perhaps the public library but not worth the time to go over there just for this. What a PITA.

My suspicion is that some users of the dighera.com website are using it to distribute malware (attack vectors), or host password snitchers used by Phishing e-mails. Thus various services trying to protect you from this in various ways.

For instance, at work we use a service that rewrites all "links" (pointers

to things on the internet) in incoming emails to a different link that goes through them and evaluates the trustworthiness of the site, whether it's common in Phishing e-mails, and whether it is serving malware. It may even virus-scan the content of the link if it does fetch it. So don't assume that the e-mail you receive from this list is identical to the copy received by other members of the list.

There are also services that provide your computer pointers to domain name servers (which translate names to numeric IP addresses) which don't return the "true" IP address of distrusted sites. Instead they point to a site that is under their control, and may give you the 403 error message, or may virus scan the content, etc. So different members of the list may get a different IP address for dighera.com.

(Think of the Domain Name System [DNS] as a giant distributed ham callbook that translates the names of hams to their callsigns. You can't do CQ Fred Smith, but you can CQ WZ9ZZZ.)

These are value-add services that your Internet Service Provider may well be providing. Unfortunately all such technologies are not immune from false positives.

It's a war zone out there!

The IP address of dighera.com is 192.249.124.142 (according to the very unfiltered Google nameserver at 8.8.8.8), you can put that in place of dighera.com in the address bar, and you'll bypass any security features based on DNS.

?? But... the blocking is not happening in my machine, at least as far as I can tell. It seems to be the site itself blocking access. I have both an anti-malware and anti virus program running. When they block something they tell me about it in detail. They are not blocking the site. I have one other trick I will try, just thought of it.

?? Got it! I used Tor browser to access it. For more about this see:  
<https://www.torproject.org/>

?? Has proven useful a few times. However, it can be very slow.

?? As far as the wavemeter is concerned, its very interesting. I will have to study more to figure out exactly what it was intended for. Wavemeters were very common in the days of early wireless both for measuring frequency and for measuring the width of a signal. The Kolster Decremeter was used for both purposes. Details can be found in several handbooks from the early wireless days.

That web site/domain name giving some folks fits has a problem with its security certificate. Some browsers are configured to reject access to name mismatched certificates. As one person noted, TOR can bypass the warning.

OT, certainly, but an interesting wavemeter design. I have a old Lysco wavemeter and it doesn't have a buzzer.

HI Richard,

Here are the best two answers that I received to my original question.

The MP-4 is more of signal generator than a wave meter. It uses a buzzer to produce a signal in order to find the most sensitive spot for the cat's whisker of the galena crystal in the receiver. Page 167 from Bucher's Practical Wireless Telegraphy provides an explanation of the buzzer's application.

You probably remember my writing about the close-call with  
1800V in the G0-9, now respectfully named "The Snake."

The 1800V jumped to the tip of my left pinkie finger and  
blew out in several places along the outside of my left hand,  
down to the level of the base of my palm, including a nasty  
pair of holes that looked much like a snake bite.  
The flesh healed just fine, but the "felling" along the outside  
of my left hand has not returned.? The Doc tells me it's not  
going to return.? There is a numb stripe from the tip of my  
left little finger, along the outside of my hand to the base  
of the palm.? The 1800V flash-fried the nerves there.

It's not debilitating or anything- just an annoyance.  
Also seems to have aggravated the arthritis in that finger.  
Had that lightening gone across my chest,  
what nerve bundles would it have fried?  
It is a forever-more reminder of the result of one moment  
of inattention, one time getting our safety procedures  
out of order, one arrogance, thinking we're smarter  
than Safety rules, might be our last.

Thank you, Dave, for posting this timely and most important warning about the dangers and lethality of High Voltage.

Sad to learn that it caused major nerve damage in your hand. But as you said, it certainly could have been a-one-and-done fatal event.

In the early 1960s my brother-in-law and I built a dual 813 linear amplifier from scratch. A circuit from the ARRL handbook, I believe.

I don't remember the exact B+ voltage involved, but I am sure that it was knocking on the door of 2000 Volts.

Looking back on the experience, we completed the project successfully with no wiring errors, no insulation breakdowns, and no human contact with the B+. Probably because we worked as a team. He had my back, and I had his. And we double checked things as we built it and were mindful of safety issues before we turned on the B+.

We were lucky.

Fast forward forty years. I got hit with 550 V from a regulated power supply which I was working on that I thought was off. Wrong! It was on, and when I touched the plate leads it felt like I had been electrocuted. Now it didn't knock me out, but I was stunned for several minutes, felt my heart flutter, and couldn't move.

What saved me? Probably my tennis shoes... I guess the rubber soles were enough insulation to prevent me from being killed.

Taught me a lesson, that I've never forgotten. And that I'm reminded of every time I get near any high-voltage.

Thanks, Dave, for reminding us of what can happen if we become inattentive while working around High Voltage. Glad you're alive tell us what happened.

Much appreciated,  
Tom KE4RHH

Subject: [BoatAnchors] Looking for schemnatic gor 7 pin HC-10 Adapter  
Message-ID: <991052252.2589.1584294620866@wamui-moana.atl.sa.earthlink.net>

My Manual for the Hammarlund HC-10 only has a schematic for the 9 pin adapter.

I need the same for the 7 pin. Anyone have this or better yet a 7 pin adapter itself to hook my HC-10 to my HQ-110.

From Centers for Disease Control:

What are the symptoms of Covid-19?  
The most common symptoms of Covid-19  
?are a fever, seen in almost 90 percent  
?of patients, as well as a dry cough  
and shortness of breath. A study of 71  
?patients in China also suggests that  
a significant portion of coronavirus  
patients experience diarrhea, nausea,  
?or vomiting, sometimes before  
respiratory symptoms begin.

The World Health Organization (WHO)  
says these symptoms typically come  
on gradually.  
Around 80 percent of Covid-19 cases  
?are reportedly ?mild,? but as  
?James Hamblin of the Atlantic  
noted, that word can be misleading:

As the World Health Organization  
?adviser Bruce Aylward clarified  
?last week, a ?mild? case of COVID-19  
?is not equivalent to a mild cold.  
?Expect it to be much worse:  
fever and coughing, sometimes  
?pneumonia?anything short of  
requiring oxygen. ?Severe? cases  
?require supplemental oxygen,  
sometimes via a breathing tube  
and a ventilator. ?Critical?  
cases involve ?respiratory failure  
?or multi-organ failure.?  
The incubation period before  
symptoms appear ranges from  
two to 14 days, but the median  
?is 5.1 days. If you've been  
around someone who has a  
confirmed diagnosis of Covid-19  
?or displays its symptoms,  
the most responsible thing  
to do is to self-quarantine  
for two weeks.

Please pay attention as the situation is fluid,  
changing by the hour.  
Please listen to your doctor and the experts.  
Some decisions, from family members  
to government heads, may not be "right."  
Try to be forgiving; that ain't no instruction book.  
We're all feeling our way through the dark.  
Be good to one another.? Take care of one another.  
Good Lord guide us in the months ahead.

Good info, Dave, but if you are experiencing the symptoms you describe CALL (with a telephone) your doctor's office, medical clinic or HMO where you normally obtain medical services. Describe in detail your symptoms so you can be properly triaged and advised. Follow the advice so treatment, if needed, is not delayed. Stay healthy, stay at home.

Hello gang,

Most of us are in the group that are most vulnerable to the virus. I am staying

in the house except to pick up food and visit a doctor.

I have several projects in progress. First I want to get my station back on the air. I need to align one of my FT-980's.

I just ordered a 9 pin adapter to hook my Hammarlund HC-10 into my HQ-110. I have a complete Heathkit SSB pair to hook up and I just got a 110v Dow Key relay from Jon K1VVC. Long term I will get rollers for my second file cabinet to replace the small desk and lay my luan door on them as I get the ability to move the desk out from the wall so I can better maintain my rig hook ups. I also need to upgrade my shack PC from W 7 to W 10. I just hate it that I spend more time on PC issues (with the PC and my IC-7300 ricebox which is really a PC that acts like a radio).

Hope everyone comes through this virus so we all can get back to business.

Hi Dave,

In case you or others on the list don't know this, Microsoft now makes Win 7 and Win 8 upgrades to Win 10 available for free. I discovered this fact just a few days ago. Now, here's the really good part: The upgrade is easy and reliable. The first time I upgraded Win 7 to Win 10 a few years ago, I spent two weeks reloading software, dealing with unexpected lockups and crashes. Upgrading was, to put it mildly, a nightmare.

This time, the experience was completely different. I googled "upgrade Win 7 to Win 10," and went to the microsoft update page. I clicked on "update" and downloaded the update installer. I tested it out by upgrading first a computer I seldom use, not even bothering to back up its files and directories. The upgrade was effortless, taking about three hours to complete, most of which went automatically. At the end, everything worked flawlessly and I had the latest revision of WIndows 10. All my email files, my specialty programs (e.g., DXLabs Suite, Omniglyph PCB layout, etc.) plus directories, Dropbox, Sonos, etc., all just worked. My passwords were transferred automatically. I was, to put it mildly, dumbfounded. In the end, I upgraded three computers, not bothering to back any of them up first. The update installer first installs Win 10, and then systematically installs all the updates and revisions. Truly amazing, especially considering my dismal earlier experience with Microsoft upgrades.

73,  
Jim W8ZR

If any of you visit your doctor, let us know if  
you were given the test and treatment, if  
needed. I wonder if the medical field is  
overwhelmed with inadequate "stuff" needed for  
Coronavirus and management does not want to admit  
it. I think it's very important to stay healthy  
until they get a handle on things.

Boatanchor folks,

I seem to have lost my connections to the General Radio mailing list. It was on Yahoo, and I assume they dumped it along with all the other mailing lists.

Is there a mailing list now for General Radio topics?

I have unearthed here a GR 729A battery portable megohmmeter and am looking for a manual or schematic.

Thanks,

Roy

?? See  
<https://www.ietlabs.com/genrad/index.html>

?? I don't see a manual for the 729A listed but there is an  
article on it in the \_Experimenter\_ for July, 1940.

See:  
[https://www.ietlabs.com/pdf/GR\\_Experimenters/1940/  
GenRad\\_Experimenter\\_July%20\\_1940.pdf](https://www.ietlabs.com/pdf/GR_Experimenters/1940/GenRad_Experimenter_July%20_1940.pdf)

?? Has at least the basics and specs.

Subject: [BoatAnchors] Want a TCS Noise Limiter?

Message-ID: <10cd01d602f5\$7f3f0d50\$7dbd27f0\$@sprynet.com>

This is the Noise Peak Limiter CUZ-50159 for TCS Contract NXsr-65286. Works with some or all variants of the TCS receivers, not sure. Includes the 12SQ7, which the original kit did not, plus a 6H6. Small gray box with an octal plug on the bottom fits into the existing 12SQ7 socket in the radio. The plug's keyway is missing.

The complete kit consists of a rotary switch and a new legend plate, these items are not included, nor are the installation instructions. I've never used this gear and have no idea if it works.

Yours, as-is, shipped domestically for a total of \$30, foreign shipments at whatever the extra cost is. PayPal preferred, email petef at sprynet.com

Thanks!

Pete

The instructions are NAVSHIPS 900,005-IB. Hard copy reprint \$3.00 mailed CONUS. And if more than one of you wants a noise limiter, I have a few left. Either direct or on eBay.

Robert Downs

From: jerry.proc at sympatico.ca (Jerry Proc)  
Date: Thu, 26 Mar 2020 11:12:32 -0400  
Subject: [BoatAnchors] Salvor 3 Radio  
Message-ID: <20f201d60380\$f9603f60\$ec20be20\$@proc@sympatico.ca>

Hello Everyone,

I am cataloging a Marconi Salvor 3 radio which is currently posted to

[http://jproc.ca/britishmarconi/salvor\\_iii.html](http://jproc.ca/britishmarconi/salvor_iii.html)

The power specification in the spec sheet is very confusing

[http://jproc.ca/britishmarconi/slavor3\\_spec\\_sheet.jpg](http://jproc.ca/britishmarconi/slavor3_spec_sheet.jpg)

Why is the A2 power level greater than A1? Usually it's the other way around.

And what is this 140 watts all about?

And why does the power level drop from 20 watts ( ie 75 to 55 watts) across a frequency span of only 20 KHz ? (Ie 480 to 500 KHz)

This looks like it was written by a marketing type who has just enough technical knowledge to be dangerous J

I was hoping my copy would look like:

Power out:

70 watts using A1 mode

55 watts using A2 mode

Is this OK?

Regards,

Jerry Proc

Charlie,

Good to hear from you and know that you are also still on the green side!

There were actually only two types of dynamotor power supplies made for the TCS. The first was a dual-dynamotor unit running off of 12 VDC that is mostly found as NT-21881 that was made by several contractors including Collins. It is also found with -A and -B suffixes. And also found as CWS-211035 made for TCS-8. The second was the 12V/24V single-dynamotor COL-211330 and COL-211330-A.

In addition, there were about eight different Motor-Generator sets that ran on 12, 24, 32, 115 and 230 VDC and 115 and 230 VAC.

Finally, there were four AC Rectifier supplies that ran on 115, 230, and 115/230 VAC.

NAVSHIPS 900,291 officially covers TCS-7, -9, -10, -11 and -12. Including all of the power supplies listed above. Practically, it also covers TCS-6, -8, -13, -14 and -15. And aside from some mechanical differences, will work for TCS through TCS-5. I have a reprint of it available for \$33.50 plus shipping. The only units that it doesn't cover are the standalone 56Q transmitter and its two AC supplies. And the PP-380/U TCS power supply. There is a Collins manual without USN number on the 56 at . And the manual on the PP-380 is NAVSHIPS 91271.

Robert Downs

Hi Again: Thank you for all of the useful info. Actually, I did not propose an inquiry into the TCS system which I have well represented here in a functional way. What I was asking about was if you knew of a reference text listing all of the dynamotors that history and the military bestowed upon us throughout the relevant history of them. I know you have a competent library on these subjects so I could not pass on the opportunity to inquire and say hello once again. In other words, from DYN1 to DYN xxxx, is there a list or reference with info on the whole family

of these smooth sounding devices. Other than that, I appreciate the response and I imagine the SCR506 story that we share is still in your memory.??As I recollect, years ago I found one for you in England as I was reviewing an advert in a British radio journal in the middle of the night. The seller, a woman, listed it as a BC506. Knowing there no such animal, I called you at 2AM and suggested that you get on it, which you did.?It was shipped to the US, but by accident, went first to California which added further to the cost. Do you still have it? Maybe not. I have the set, but still need the 24 volt dynamotor, a DM43 as I recollect. Anyway, good to be in touch, regardless.?Hope you are well and still enjoying radio. My apologies to the list for this OB discourse. Please respond off list to me at BC375 at Comcast.net. All the best to you and many thanks to Jack for years of his service to this site. Charlie KA1GON. Sent from my Verizon, Samsung Galaxy smartphone

Hi Charlie

I think I have a DM 43 24v dynamotor for your BC 653 xmtr. I will root around this weekend and let you know what I find.

It would be extra to my needs as my SCR 506 is set up for 12v operation.

73

Subject: [BoatAnchors] Sonar DF-6X DF Receiver. Info?  
Message-ID: <9665fc9d-5cee-7dd0-6b3e-e135c4e750df@ix.netcom.com>

Finally got this Sonar DF-6X running, but would like to tweak the audio  
output.

Anyone by chance have a diagram/any info??? Google was a dry well on

this one.  
Thanks,  
Dave AB5S
